

Thunderstorms and lightning activity in São Paulo metropolitan area during CHUVA-GLM Vale do Paraíba field experiment

CHUVA-Lightning Mapping Campaigns: CHUVA-GLM Vale do Paraíba

• Goals:

- Besides CHUVA main goals (*precipitation measurements*) ...
- Contribute to **GOES-R GLM** and **MTG LI** activities by collecting total lightning data under MSG coverage:

1) Lightning Location Systems intercomparisons:

- Understand the differences between ground based LLS in respect to TRMM LIS;
- Generate GLM and LI proxy data.

2) Develop multi-sensor and multi-platform algorithms:

- satellite QPE;
- nowcasting of severe weather.

CHUVA-Lightning Mapping Campaigns: CHUVA-GLM Vale do Paraíba

Deployed total lightning networks :

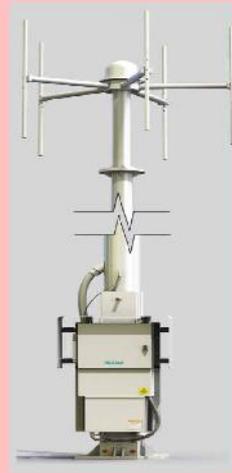

12 LMA sites
(VHF)

7 LINET sites
(VLF-LF)

5 TLS200 sites
(LF-VHF)

7 EN sites
(ELF-LF)

Operational networks :

RINDAT (LF)
STARNET (VLF)
WVLLN (VLF)
GLD360 (VLF)
ATDnet (VLF)
BrasilDAT (ELF-LF)

6 High Speed Video Cameras

8 Field-Mills

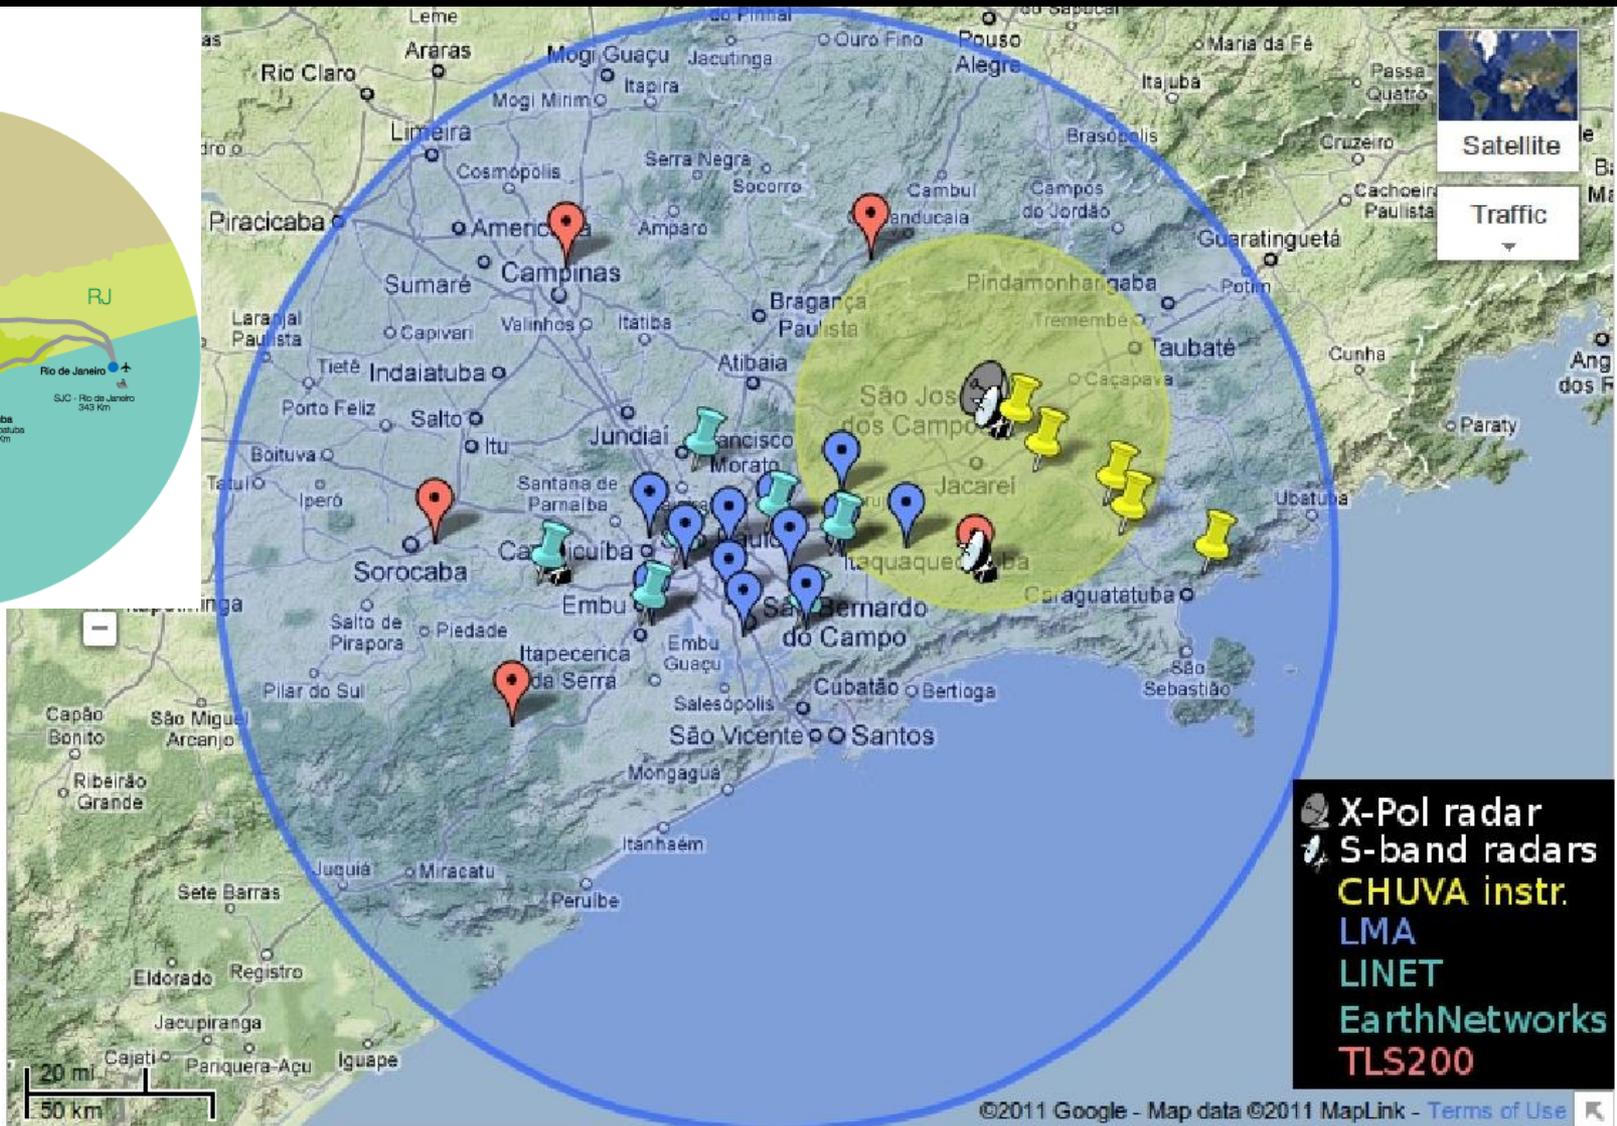

Satellite Observations :

GOES-12
MSG
TRMM

CHUVA-Lightning Mapping Campaigns: CHUVA-GLM Vale do Paraíba

LLS available data

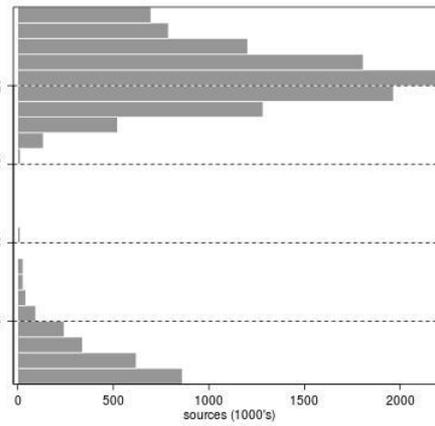

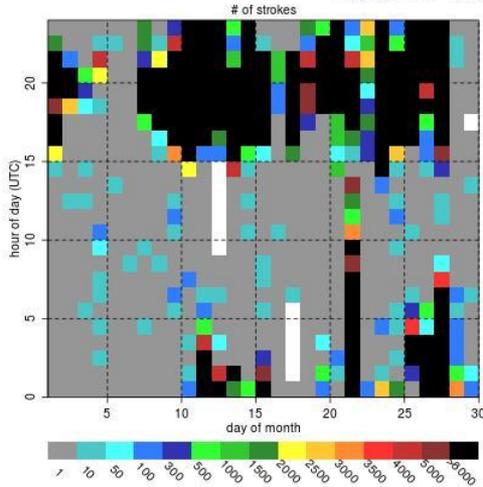

- **Lightning Mapping Array (NASA/UAH/NOAA) [2011-10-24 to 2012-03-31]**
- **LINET (EUMETSAT/DLR) [2011-11-01 to 2012-03-31]**
- **TLS200 (Vaisala) [2012-01-01 to 2012-03-31]**
- **ENTLN (EarthNetworks) [2011-11-01 to 2012-03-31]**
- RINDAT (INPE) [2011-11-01 to 2012-03-31]
- STARNET (USP) [2011-11-01 to 2012-03-31]
- WWLLN (Univ. Washington) [2011-11-01 to 2012-03-31]
- GLD360 (Vaisala) [2011-11-01 to 2012-03-31]
- ATDnet (MetOffice) [2011-11-01 to 2012-03-31]
- TRMM-LIS [2011-11-01 to 2012-03-31]

Nowcasting

Interactions with Brazilian Weather Forecast Offices

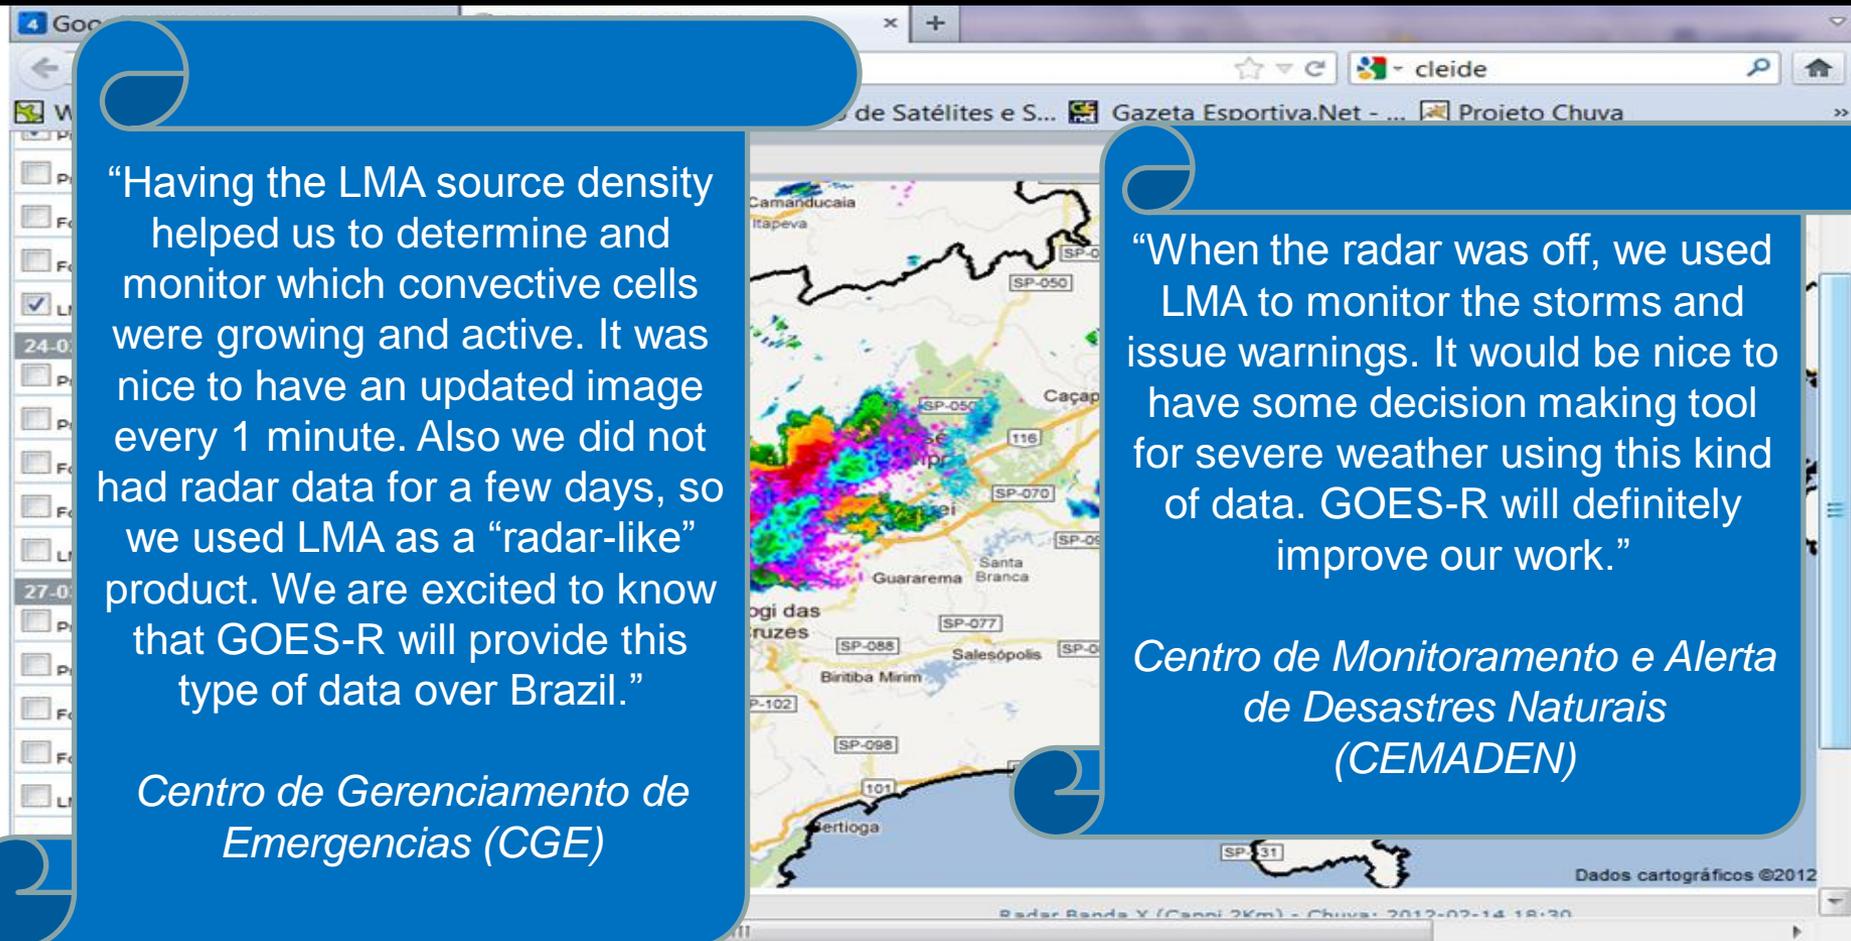

6-minute LMA source density plots overlapped with radar, satellite and NWP

“Having the LMA source density helped us to determine and monitor which convective cells were growing and active. It was nice to have an updated image every 1 minute. Also we did not had radar data for a few days, so we used LMA as a “radar-like” product. We are excited to know that GOES-R will provide this type of data over Brazil.”

Centro de Gerenciamento de Emergencias (CGE)

“When the radar was off, we used LMA to monitor the storms and issue warnings. It would be nice to have some decision making tool for severe weather using this kind of data. GOES-R will definitely improve our work.”

Centro de Monitoramento e Alerta de Desastres Naturais (CEMADEN)

Nowcasting

Interactions with Brazilian Weather Forecast Offices

“Lightning-jump” for tropical severe weather?

- PRELIMINARY RESULTS (20+ cases during CHUVA-GLM Vale do Paraíba):
- 07 January 2012: **hail, damaging winds and flooding** were reported in São Paulo and Guarulhos.
